

## **Sheridan**

The average worker may say “Automation will put us all out of jobs.” Explain why, from Sheridan’s point of view (regarding what automation means) this is untrue.

Create a RABA-RABA chart, similar to MABA-MABA. RABA-RABA stands for, “Real people are better at; Robots are better at.” In particular, consider a physically embodied wheeled robot suitable for flat floors (e.g. electric wheelchair style propulsion) fitted with a single robot arm with a two-flange gripper. Your chart should have at least 6 rows.
